

Paintseal AUSTRALIA

World Class Paint & Fabric Protection

Keeping your pride and joy clean is both challenging and time consuming. Many cleaning products contain abrasive chemicals required to remove these stubborn marks, like tree sap and streaking. They can actually wear the paint surface down and over time leave the exterior finish looking flat.

Your interior fabrics are always subject to threat of staining as a result of an accidental spillage etc.

Why have Paintseal Australia protective products?

Paintseal Australia supply and fit world class PTFE Teflon just like on a household pan, so the dirt finds it hard to attach itself. The sealant is for both exterior paintwork and interior fabrics; sealing and protecting. It's a superior barrier against dirt and grime protecting your investment. PTFE Teflon will keep your unit looking shiny at all times. No more polishing, just easy to clean using no more harsh chemicals and very little water which is better for the environment and the pocket. Giving a lovely shine and gloss again and again.
